

KEY DEPOSIT CASE UK 20 - UK 30

Depository designed for the storage of keys, weapons, mobile phones, medicaments, valuables and other small sized items. It is suitable for all places where authorized access to stored items is required.

Figure 1
Module for 20 safe-boxes

Unit UK 20 (figure 1) constitutes the base of the entire system. The module controls the entire set, enabling connection to the electronic security system and the computer with visualization for on-line transmission of events, e.g. to the supervisor, receptionist or controller. The maximum number of safe-boxes is 20 where safe-deposit vault, important room-door and storage room keys or mobile telephones can be deposited while one enters premises requiring high level of security and secrecy. Each user is assigned a selected number of boxes and the time period in which he can handle them (chart 1).

A second set type consists of the base module UK 20 and one optional extension module UK 30 (figure 2). The number of safe-boxes is thus increased to 50. All control and communication continues to be provided by the base module.

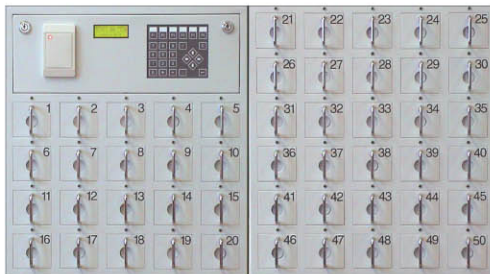

Figure 2 - Set of 50 safe-boxes (UK 20 plus UK 30)

A third set type contains one base module UK 20 and two extension modules UK 30 (figure 3). The entire set comprises 80 safe-boxes. If needed, up to 99 such sets (whether complete or partial) may be installed beside one another and placed under control of one central computer (figure 5).

The size of the module is identical for both UK 20 and UK 30: 560 mm (wide), 610 mm (high), 280 mm (deep). The required area for one module installation is 0.34 sq. m.

Name	SVOBODA MILAN
Validity	from 1.1.2002 to 31.12.2004
Boxes	3, 7, 11, 17
Card ID	125714110
PIN	1109
Rights	Administrator

Chart 1 - Example of user's registration record

All key deposit cases are produced to comply with ISO 9002 and CSN standards and are certified by the firm Trezor-test and the Military Technical and Electrical Institute. The whole case is made of an exceptionally strong material which, together with a shock sensor put up on the deposit case, warrants 100% security in respect of the items deposited. Production and assembly is mainly carried out with the use of components made by Czech producers and exclusively by Czech nationals. Installation is made by specially trained technical staff who are screened by the National Security Office. Generally, installation, including the training of the operating staff, takes one day only.
