

## VISUALIZATION UK 20 - UK 30

**Software enabling comfortable control of key deposit cases UK 20 and UK 30, including their programming and monitoring**

Figure 4 - Main window of visualization

### MAJOR CHARACTERISTICS

Visualization is installed within the computer of the supervisor, receptionist or controller. It is a software solution due to which a client may use on-line transmission to monitor the status in the key deposit case (figure 4) and the chain of events (number of boxes issued, number of boxes vacant, attempt to use unauthorised access, alarm status, inserting wrong PIN code, etc). The system also serves to set operating parameters, access codes, the time for collection of boxes, PIN codes, card numbers or assignment of boxes to particular users from a remote workplace. In addition, visualization serves to retain events and allow printouts of statistics in respect of a selected user, box, date etc. The software complies with the requirements placed on attendance recording systems.

The system also serves to set operating parameters, access codes, the time for collection of boxes, PIN codes, card numbers or assignment of boxes to particular users from a remote workplace. In addition, visualization serves to retain events and allow printouts of statistics in respect of a selected user, box, date etc. The software complies with the requirements placed on attendance recording systems.

### FOR USE BY

Police, security guards, banks, power generation plants, gasworks and any clients who need to have their keys put in safe custody and keep them and their employees under permanent control.
